

EATING DISORDERS CERTIFICATE

According to statistics compiled by the National Institute for Mental Health, eating disorders have the highest mortality rate of any diagnosable mental illness in the United States. Eating disorders are one of the largest undiagnosed and untreated problems facing mental health and medical practitioners today, yet training specific to eating disorders is extremely rare.

Given lifetime prevalence rates of eating disorders and associated concurrent disorders, it is inevitable that professional mental health practitioners across a wide array of settings will be faced with clients presenting with these problems.

Eating Disorders Certificate

The Eating Disorders Certificate Program is an 8-credit course of study that provides the comprehensive knowledge base required to work professionally with clients experiencing disordered eating. Participants join with practitioner faculty in small classes for discussion, study, and field experience. This program is appropriate for graduate students completing master's degrees in counseling or therapy, as well as mental health and addictions practitioners, nutritionists, or medical personnel working in the field.

Certificate Requirements

A minimum of eight semester hours, distributed as follows:

Required Courses

CPED 572	Introduction to Eating Disorders	1
